Customer Problem Statement Template

Create a problem statement to understand the customer's point of view. For the project **Import Data using Transform Maps (Spreadsheet)**, the statement focuses on making spreadsheet-based data imports into ServiceNow accurate, consistent, and easy to manage.

A well-defined problem statement helps the team identify the challenges customers face while uploading spreadsheet data, mapping fields, validating records, and avoiding incorrect or duplicate data. It also helps the team design a reliable Transform Map based import process.

I am	Describe the customer and their attributes here	A ServiceNow user or administrator who needs to import structured data from spreadsheets into the correct ServiceNow table.
I'm trying to	List the thing they are trying to achieve here	Import spreadsheet records quickly and accurately by matching spreadsheet columns to ServiceNow fields using Transform Maps.
but	Describe the problems or barriers that get in the way here	Manual data entry, incorrect field mapping, missing values, duplicate records, and import errors can make the process time-consuming and unreliable.
because	Describe the reason the problems or barriers exist	Spreadsheet formats and ServiceNow table fields may not match directly, and users may not have a simple way to validate and transform the incoming data before it is inserted.
which makes me feel	Describe the emotions that result from experiencing the problems or barriers	Frustrated and concerned about data quality, failed imports, duplicate records, and the extra time required to correct errors.

Final Problem Statement: ServiceNow users need a simple and reliable way to import spreadsheet data into the correct ServiceNow tables, but inconsistent spreadsheet data, field-mapping issues, duplicates, and validation errors can make imports difficult and error-prone. A Transform Map based process should make the import easier

to configure, validate, transform, and complete accurately.
