Acceptance Testing
UAT Execution & Report Submission

Date	29 September 2026
Team ID	SWTID-2026-2550
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

1. Purpose of Document

The purpose of this document is to briefly explain the test coverage and open issues for the **Import Data using Transform Maps (Spreadsheet)** project at the time of release to User Acceptance Testing (UAT). The testing focuses on importing spreadsheet data, mapping source fields to target fields, transforming data correctly, and validating the imported records in the target table.

2. Defect Analysis

This section summarizes the UAT validation areas and the expected handling of issues identified during spreadsheet data import and Transform Map execution.

Resolution / Validation Area	Severity 1	Severity 2	Severity 3	Severity 4	Subtotal
By Design	0	0	0	0	0
Duplicate	0	0	0	0	0
Data / Mapping Issue	0	0	0	0	0
Configuration Issue	0	0	0	0	0
Total	**0**	**0**	**0**	**0**	**0**

3. UAT Test Coverage

Test Area	Expected Result	Status
Spreadsheet Upload	Spreadsheet file is accepted and source data is loaded successfully.	Pass
Transform Map	Source fields are mapped to the correct target fields.	Pass
Data Transformation	Configured transformations are applied correctly to imported data.	Pass
Record Import	Valid records are created/updated in the target table without data loss.	Pass
Validation	Imported records match the spreadsheet values and mapping rules.	Pass
Error Handling	Invalid or incomplete records are identified and handled appropriately.	Pass

4. Open Issues / Observations

No critical open issues were recorded for the UAT scope at the time of report preparation. The spreadsheet import, Transform Map field mapping, transformation rules, and target record validation are considered covered by the above test scenarios.

5. UAT Conclusion

The UAT execution for **Import Data using Transform Maps (Spreadsheet)** covers the key functional flow from spreadsheet upload through Transform Map processing and target record validation. The documented test scenarios provide coverage for successful import, field mapping, data transformation, validation, and error handling.
