Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Empathy Map Canvas:

An empathy map is a simple visual tool that captures the user's needs, behaviour, thoughts, feelings and challenges. For this project, it helps the team understand the experience of a user who imports spreadsheet data into ServiceNow using Import Sets and Transform Maps.

The map focuses on the user's perspective while preparing a spreadsheet, loading data, mapping source fields to target fields, validating the transformation, and checking the final imported records.

Empathy Map – Import Data using Transform Maps

<table>
<tr><td colspan="3">THINK & FEEL
• Wants the import process to be simple and reliable
• Is concerned about incorrect field mapping
• Wants confidence that records are imported correctly
• Feels pressure when large datasets contain errors</td></tr>
<tr><td>SAY
• “The spreadsheet should have the correct columns.”
• “I need to know which fields are mapped.”
• “I want to see why some records failed.”</td><td rowspan="2">USER
■
ServiceNow Data Import User</td><td>HEAR
• Instructions from the project/team
• Feedback about data quality
• Suggestions to validate the import before final submission</td></tr>
<tr><td>SEE
• Spreadsheet rows and column headers
• Import Set and Transform Map configuration
• Transform history, logs and imported records</td><td>DO
• Prepare and upload the spreadsheet
• Configure source and target field mappings
• Run the transform and review results
• Correct errors and re-import when required</td></tr>
<tr><td>PAINS
• Missing or mismatched columns
• Duplicate or invalid records
• Incorrect field mapping
• Transformation errors and unclear logs</td><td>GAINS
• Faster bulk data entry
• Accurate and consistent records
• Clear validation and error handling
• Repeatable import process</td><td>GAINS
• Faster bulk data entry
• Accurate and consistent records
• Clear validation and error handling
• Repeatable import process</td></tr>
</table>

Project Focus: Use a spreadsheet as the source data, load it through an Import Set, configure a Transform Map to match source fields with the ServiceNow target table, and validate the transformed records.
