Brainstorm & Idea Prioritization Template

Date	29 September 2026
Team ID	SWTID-2026-2550
Project Title	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment for the team to identify simple and effective ideas for importing spreadsheet data into ServiceNow. The team can discuss different approaches, identify possible data issues, and select a suitable method for transforming and loading the data accurately.

For the project **Import Data using Transform Maps (Spreadsheet)**, the brainstorming process focuses on understanding the source spreadsheet, mapping fields correctly, transforming data when required, and ensuring that the imported records are stored correctly in the target table.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Before you collaborate: Review the spreadsheet structure, required fields, target ServiceNow table, and the expected output before starting the discussion.

Team gathering: Discuss the available spreadsheet data, identify important columns and determine which fields require transformation or validation.

Define your problem statement: How can spreadsheet data be imported into ServiceNow accurately using Import Sets and Transform Maps while reducing data errors and ensuring correct field mapping?

Step-2: Brainstorm Possible Solutions

• Create an Import Set Table to receive the spreadsheet data.

• Use Transform Maps to map source fields to the target table.

• Apply field mapping and transformation logic wherever required.

• Validate mandatory fields and check for incorrect or duplicate data.

• Test the import with sample records before performing the final import.

Step-3: Prioritize the Best Ideas

Idea	Purpose	Priority
Import Set Table	Stores spreadsheet data before transformation	High
Transform Map	Maps source fields to target fields	High
Field Transformation	Converts data into the required format	High
Data Validation	Checks accuracy and completeness	Medium

Selected Problem Statement: To import spreadsheet data into ServiceNow using Import Sets and Transform Maps, with accurate field mapping, necessary data transformation, and validation of the imported records.
