Team Tittle : Import Data using Transform Maps (Spreadsheet)
Date : 29/09/2026

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Spreadsheet Data Preparation	Create Spreadsheet Template Enter Source Data Validate Column Headers
FR-2	Import Data using Import Set	Upload Spreadsheet Create Import Set Load Source Data into Import Set Table
FR-3	Transform Data using Transform Maps	Create Transform Map Map Source Fields to Target Fields Configure Field Mapping and Coalesce
FR-4	Validate Imported Records	Run Transformation Check Imported Target Records Review Transformation Logs and Errors

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	The solution should provide a simple process for uploading spreadsheets, mapping fields, and importing records.
NFR-2	Security	Imported data should be accessible only to authorized users and follow ServiceNow access controls.
NFR-3	Reliability	The transformation process should import valid records consistently and provide error information for failed records.
NFR-4	Performance	Spreadsheet data should be imported and transformed within an acceptable time for the expected data volume.
