Project Design Phase-II
Technology Stack (Architecture & Stack)

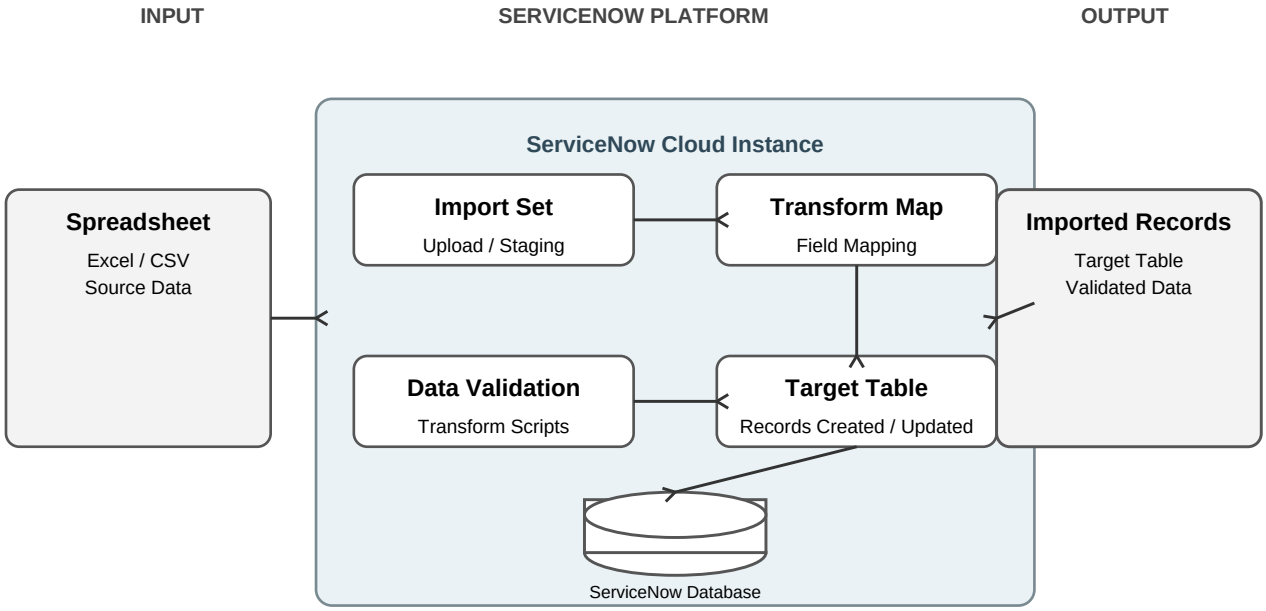
Date	29 September 2026
Team ID	SWTID-2026-2550
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Technical Architecture:

The solution imports spreadsheet data into ServiceNow by using an Import Set and Transform Map. The spreadsheet is uploaded as source data, staged in the Import Set, mapped and transformed into the required target table, validated, and stored as ServiceNow records.

Project: Import Data using Transform Maps (Spreadsheet)

Technology / Platform: ServiceNow Cloud, Import Sets, Transform Maps, Transform Scripts, ServiceNow Database



External interface: Spreadsheet (Excel/CSV) • ML interface: Not applicable

Architecture Guidelines Covered

1	Application processes	Spreadsheet upload → Import Set → Transform Map → Validation/Transform Scripts → Target Table
2	Infrastructure	ServiceNow Cloud instance
3	External interface	Excel / CSV spreadsheet used as the source input
4	Data storage	ServiceNow Database / Target Table
5	Machine learning	Not applicable for this project

S.No	Component	Description	Technology
1	User Interface	How the user uploads/selects the spreadsheet and starts the import process	ServiceNow UI / HTML, CSS, JavaScript
2	Import Set	Stages the spreadsheet data before transformation.	ServiceNow Import Set
3	Transform Map	Maps source spreadsheet fields to target table fields and applies transformation logic.	ServiceNow Transform Map
4	Transform Scripts	Performs field-level or row-level validation and transformation when required.	JavaScript / ServiceNow Scripts
5	Target Table	Stores the final imported and transformed records.	ServiceNow Table / Database

S.No	Component	Description	Technology
6	Data Storage	Persistent storage for imported records and related platform data.	ServiceNow Database
