PROBLEM–SOLUTION FIT

Team ID: SWTID-2026-2550 | **Team Title:** Import Data using Transform Maps (Spreadsheet)

Date: 29/09/2026

Purpose

■ Simplify importing spreadsheet data into ServiceNow tables.

■ Reduce manual data entry and minimize data-mapping errors.

■ Use Transform Maps to match spreadsheet fields with target table fields.

■ Make the import process faster, consistent, and easier to manage.

■ Provide a repeatable solution for importing structured data.

1. CUSTOMER SEGMENTS ServiceNow administrators, developers, students, and teams who need to import spreadsheet data into ServiceNow.	**2. CUSTOMER CONTEXT** Users have spreadsheet records that must be transferred into a ServiceNow table accurately and efficiently.	**3. AVAILABLE SOLUTION** Use an Import Set and Transform Map to load spreadsheet data, map source fields to target fields, and transform records.
4. JOBS-TO-BE-DONE / PROBLEMS Import large numbers of records without entering them manually; avoid incorrect field mapping and duplicate or missing data.	**5. PROBLEM ROOT CAUSE** Manual entry is time-consuming and error-prone. Spreadsheet columns may not directly match ServiceNow target fields.	**6. BEHAVIORS** Users prepare spreadsheet data, upload it, configure field mappings, run the transform, and verify imported records.
7. TRIGGERS Need to migrate existing spreadsheet records, update a ServiceNow table, or import many records at one time.	**8. VALUE DRIVERS** Saves time, reduces manual errors, improves consistency, supports repeatable imports, and makes data migration easier.	**9. CHANNELS OF DELIVERY** ServiceNow Import Sets, Transform Maps, spreadsheet/Excel files, ServiceNow tables, and administrator/developer workflows.

Problem-Solution Fit Summary: The project addresses the difficulty of importing spreadsheet records into ServiceNow by using Import Sets and Transform Maps to create a structured, accurate, and repeatable data-import process.
